

OR+ RXM Drug Allergy Interface

PRODUCT FACT SHEET

Array is pleased to introduce a new **OR+** interface that provides real time access to the surgical patient's most current drug allergy information found in the Meditech's **RXM** (Prescription Management) module. By alerting staff to known drug allergies, the **OR+ RXM** interface helps meet a key requirement of the 2009 National Safety Goals Hospital Program in the surgical suite: **improving the safety of using medications**.

How does the OR+ RXM Drug Allergy Interface work?

- The **OR+ RXM** Drug Allergy Interface actively displays the patient's current drug allergy information as soon as the patient is identified in the surgery log. **Seamless integration means information is immediately available** to doctors, nurses, and support staff.

RXM Drug Allergies for TEST,PATIENT				
Allergy	Severity	Date	Type	Comment
NONSTEROIDAL ANTI-INFLAMMATORY	Unknown	03/27/06	Alg	
ASPIRIN	Unknown	03/27/06	Alg	
CODEINE	Unknown	03/27/06	ADR	
Comment: RXN NAUSE AND DIZZY				
GUAIFENESIN	Unknown	03/27/06	Alg	
MORPHINE	Unknown	03/27/06	ADR	
Comment: RXN = SEVERELY SICK				
PENICILLINS	Unknown	03/27/06	Alg	
[PCN, AMOXICILLIN, GUAIFESSEN, BENADRYL, ROBITUSSIN CF, HALDECON] [CODEINE]MORPHINE,NSAIDS,ASA,BIOPIN,PREVACID,ESTROGEN,DARUOCE]				

- The **OR+ RXM** Drug Allergy Interface presents a **comprehensive view of known allergies for specific patients**, including the severity, type, date, and associated comments for both coded and un-coded drug allergies.

- With the **OR+ RXM** Drug Allergy Interface, the drug allergy screen can be re-viewed at any time in the surgery logging process. The patient's known drug allergy information is also actively displayed and available for review during the surgery scheduling process. This means **critical information is always accessible**.
