

Validation Guide Conversion Toolkit

PRODUCT FACT SHEET

Array Software is pleased to present our new tool to help hospitals manage their Meditech Update process. Our new **Validation Guide Conversion Toolkit** provides a method of electronically managing the files for “testing scripts” (Scenarios) associated with Meditech Updates or Ring Releases.

Validation Guides (VGs) are used to test the whole collection of changes found in a Meditech Update or Ring Release. VGs are developed by module, and the Scenarios in each VG are developed to test a process or routine. Many facilities may use VGs alone or in conjunction with DTS testing to ensure that all of the corrections and enhancements are implemented and working as designed.

*How does the **Validation Guide Conversion Toolkit** work?*

Once the VGs are downloaded from Meditech, they need to be shared with those hospital staff responsible for testing. Instead of piles of paper to copy and share, and record keeping on a spreadsheet or log book, the VGs downloaded from Meditech are converted with Array's new Validation Guide Conversion Toolkit to electronic files. Using our mature, robust TASK+ functionality, the files are turned into individual tasks which can be assigned electronically, sent automatically to the assignee, and monitored for progress and completion.

*How easy is it to use the **Validation Guide Conversion Toolkit**?*

The VG Conversion Toolkit uses several easy-to-build dictionaries to set parameters for the tasks. In a matter of moments, the downloaded Validation Guide files are converted to tasks which include all the information from the files, and spell out the testing steps and expected results.

Sometimes updates bring changes to modules that require user training, modifications to menu, dictionary and system parameters, and other changes. With the Validation Guide Conversion Toolkit, you can build a simple CDS to capture these additional needs and create, assign and track electronic tasks for them as well.

Reports are Available

Any standard or CDS field can be queried, to monitor progress, compile lists, track issues and keep you on top of the project.

Make your paper process obsolete, and work more effectively and efficiently with Array's new **Validation Guide Conversion Toolkit** for your next update! Contact us at 413-789-2600 or by email at Information@arraysoftware.com for more information or to set up a demonstration for your facility!
